

Complejidad Temporal

1. Método para formar cola:

```
31 public void formarCola() {  
32     for (int i = 0; i < building.size(); i++) {  
33         int tp = building.get(i).getPersonsList().size();  
34         for (int j = tp - 1; j >= 0; j--) {  
35             personQueue.push(building.get(i).getPersonsList().get(j));  
36         }  
37         pickupPerson(i);  
38         System.out.println(transporte.getPila().toString());  
39     }  
40 }
```

$n = \text{building.size}()$

$j = \text{tp} - 1$

| LINEA | CANTIDAD DE VECES QUE SE REPITE |
|-------|---------------------------------|
| 32 | $n+1$ |
| 33 | n |
| 34 | $n+j(n) + 1$ |
| 35 | $n+j(n) +$ |
| 37 | n |
| 38 | n |

Función: $f(x) = [4n + 2(n + j(n))] + 2$

2. Método crear persona:

```
44 public void createOffices() {  
45     int indexOffice=officesPerFloor*floors;  
46     for(int i=0;i<floors;i++) {  
47         offices.add(new HashMap<Integer, Person>());  
48         for(int j= 0; j<officesPerFloor;j++) {  
49             offices.get(i).put(indexOffice, null);  
50             indexOffice--;  
51         }  
52     }  
53 }
```

$n = \text{floors}$

$j = \text{officesPerFloor}$

| LINEA | CANTIDAD DE VECES QUE SE REPITE |
|-------|---------------------------------|
| 45 | 1 |
| 46 | $n+1$ |
| 47 | n |
| 48 | $n+j(n) + 1$ |
| 49 | $n+j(n)$ |
| 50 | $n+j(n)$ |

Función: $f(x) = n + 3(n + j(n)) + 3$
